DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species:

SPECIES I includes a display device including a first wiring, first active element, a second active element, an electric charge retaining section, a third active element, a second wiring; and a third wiring having a specific connection between the components.

SPECIES II includes a first wring, a first active element, a second active element, an electric charge retaining section, a third active element, a second wiring, a third wiring, and a fourth active element having a specific connection between the components different from that which is explained with reference to SPECIES I.

2. The species are independent or distinct because the fourth active element as described in SPECIES II would require a separate search. Since the claims are directed to a circuit, the addition of the fourth active element changes the structure of the circuit thereby requiring a separate search from the circuit described in SPECIES I.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there are no generic claims.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).
